REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the claimed invention with the features of a position of the web is controlled in the area of a trough of a concave curvature (as viewed in the longitudinal section) by at least one sensor which operates in a non-contact manner, a web tensed, due to the effect of gravity, in a treatment area localized by rollers, and nozzle fields for generating said impact jets exert a positionally stabilizing effect on the web by deploying a planar force onto the web which, similar to a spring, increases with decreasing distance between the web and the nozzle field, the magnitude of the stabilizing force depending on the dynamic pressure of the blowing fluid at the nozzle output of the impact jets is considered a non-obvious improvement over the closest prior art, Rogne et al. (US 6,049,995). Other prior art cited in this action contains some claimed elements and features, but it is considered that no motivation exists for combining those features with what is considered the closest prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on , Statement of Reasons for Allowance."
